Engineers solve problems. To do so, they apply science, mathematics, and creativity to invent, design, test, build and operate engineering systems that will meet the needs of society. In the latter half of the 20th century, engineers developed the personal computer, the space shuttle, artificial hearts and many other "high-tech" products. The opportunities to use technology for the benefit of 21st century society will be even greater.

Engineers use the same problem solving strategies whether designing a bridge, trouble shooting a computer chip problem or developing a more efficient automobile engine. This commonality of approach makes it easy for an engineer to move from one specialization to another, and it happens frequently. The engineer's can-do, problem solving outlook is also good preparation for management, and many engineers follow this career path.

Increasingly, engineers must also have good interpersonal skills to work effectively in the interdisciplinary groups required to tackle modern engineering projects. They must understand the ethical, environmental, political and business implications of their work. Engineers must work comfortably among the cultures, customs and languages of multi-national enterprises.

In light of modern society's ever-increasing dependence on technology, there is a continuing and urgent need for engineering graduates who possess the high levels of technical competence and social understanding that will enable them to fulfill their responsibilities as professional engineers. The College of Engineering prepares men and women to face these challenges and to seize their opportunities to become the technology leaders of the 21st century.

Graduates of the B.S. curricula offered by the college may enter directly into a position in industry, government, or private practice, or may pursue advanced study in graduate school. Their professional activities include research, development, design, operations analysis, construction, production supervision, and technical sales. Many practice their profession in Tennessee; but engineering knows no geographical bounds, and graduates of the college serve throughout the nation and in other countries as well.

The college has eleven major undergraduate curricula in which a student may specialize: aerospace engineering, biomedical engineering, chemical engineering, civil engineering, computer engineering, electrical engineering, industrial engineering, materials science and engineering, mechanical engineering, nuclear engineering, and engineering physics.

Biosystems engineering is based in the College of Agricultural Sciences and Natural Resources with facilities located on the Agricultural Campus. The biosystems engineering curriculum is offered cooperatively by the College of Agriculture and the College of Engineering. Details of the curriculum may be found in the College of Agricultural Sciences and Natural Resources section of this catalog.

The college, in cooperation with industrial sponsors, established the Minority Engineering Scholarship Program in 1973. The program goal is to increase significantly the number of qualified minority engineering graduates.

**FACILITIES**

Most of the college's facilities are on the southeastern corner of The Hill. Administration, Civil and Environmental Engineering, and Biomedical Engineering are in Perkins Hall; Electrical and Computer Engineering are in Ferris Hall; Industrial Engineering and the Interdisciplinary Engineering Research Centers are in East Stadium Hall; Nuclear Engineering is in the Pasqua Engineering Building; Mechanical and Aerospace, Chemical, and Materials Science are in Dougherty Hall. The Engineering Fundamentals Division is located in Estabrook Hall. The Co-op Office and the Engineering Diversity Programs Office are in Perkins Hall. The Engineering Physics program is administered through the UT Physics Department in the Nielsen Physics Building.

**COOPERATIVE ENGINEERING AND PROFESSIONAL PRACTICE**

The Cooperative Engineering Program (Co-op) is offered in order to provide an augmented engineering education that includes significant experience in industry as well as superior academic preparation. Our Cooperative Engineering Program was established in 1926. The University of Tennessee was one of the early pioneers in this valuable type of education.

Co-op work assignments differ from part-time or summer employment in that they involve regularly scheduled cycles of full-time academic terms alternating with full-time work periods, resulting in planned, career-related work terms of progressive complexity and responsibility. In introducing the student to engineering employment, the college and industry join together to offer a broader and richer preparation for postgraduate employment than can be provided by a conventional academic program. This experience in an industrial and professional environment contributes to the student's maturity, accelerates professionalism, offers an opportunity to apply engineering course work in a real-world setting, and enables the student to define more clearly educational and career interests and objectives. All positions are paid positions, and most students are able to offset a substantial amount of their college expenses with Co-op savings.

Introduction to the Cooperative Engineering Program (for new students, transfers, second-degree students, and re-entry students) begins in the first semester at the university. Assignments are determined by employer and student. All engineering students are encouraged to visit the program office.

Candidates must be able to project a minimum of 52 weeks of Co-op experience prior to the senior year, within the regular alternating sequence, to qualify for an assignment.
Further details may be obtained from the Cooperative Engineering Program, 310 Perkins Hall, The University of Tennessee, Knoxville, TN 37996-2012. You may also contact the Co-op office via e-mail at coop@engr.utk.edu or via the program homepage at http://www.coop.utk.edu

INTERNATIONAL ENGINEERING PROGRAM

The United States, like most countries throughout the world, can no longer thrive economically with only a domestic market for its goods and services. To compete in the global marketplace, engineers must understand how to design and manufacture products for worldwide use. The College of Engineering works with several organizations, both on and off campus, to enable interested students to participate in significant engineering experiences abroad. Students interested in making an international experience part of their engineering education should begin exploring opportunities and develop plans during the freshman year. Language preparation may be required. Thus, language preparation should be started immediately. For further information on international engineering educational programs, contact the UT Center for International Education, 1620 Melrose Avenue.

GRADUATE PROGRAM

Graduate programs leading to the degree of Master of Science are offered in eleven areas of study: aerospace engineering, chemical engineering, civil engineering, electrical engineering, engineering science, environmental engineering, industrial engineering, materials science and engineering, mechanical engineering, nuclear engineering, and polymer engineering. The degree of Doctor of Philosophy is offered in nine major subjects: aerospace engineering, chemical engineering, civil engineering, electrical engineering, engineering science, materials science and engineering, mechanical engineering, nuclear engineering, and polymer engineering. The degree of Doctor of Philosophy is offered in nine major subjects: aerospace engineering, chemical engineering, civil engineering, electrical engineering, engineering science, materials science and engineering, mechanical engineering, nuclear engineering, and polymer engineering.

TAU BETA PI NATIONAL HEADQUARTERS

The college is honored to have the national headquarters of Tau Beta Pi, the National Engineering Honor Society, housed on our campus. This honor was earned in part through the untried efforts of R.C. “Red” Matthews, who served as secretary-treasurer for the organization from 1905 to 1947. The suite of offices, located in Dougherty Hall, is occupied by Mr. J.D. Froula, secretary-treasurer; Roger Hawks, Assistant Secretary-Treasurer, and their staff.

CURRICULA IN ENGINEERING

NATIONAL ACCREDITATION

Since 1936, engineering programs at institutions of higher learning have been accredited by an organization formed by many engineering societies and known as the Accreditation Board for Engineering and Technology (ABET). ABET accreditation ensures that graduates of UT engineering programs are adequately prepared to enter and continue the practice of engineering. Accredited engineering programs at UT include aerospace, biosystems, civil, electrical, engineering science, industrial, mechanical, materials science, and nuclear. Co-op programs in the above areas are also accredited.

Accreditation criteria require each engineering degree program to design a curriculum and educational process that will achieve defined educational objectives consistent with ABET criteria and the mission of UT. The educational objectives of each degree program are presented by the department responsible for the program later in this chapter. In each case the objectives are consistent with the mission of the College of Engineering. That mission is to:

1. provide high quality education in the major engineering disciplines from the undergraduate through doctoral levels through a creative balance of academic, professional, and extracurricular programs;
2. foster and maintain mutually beneficial partnerships with our alumni, friends, industry, and local, state, and federal governments through public services, assistance, and collaborative research; and
3. to be a major contributor to our nation’s technology base through scholarship and research.

In addition, the educational objectives of each degree program are also guided by and consistent with the strategic objectives of the College of Engineering. Two particularly relevant strategic objectives are “to continuously provide quality delivery of courses, programs, extracurricular activities, assistance, and support that enhances each student’s desire to learn and that excites each student’s interest in engineering and the work environment” and “to continuously provide and improve the education and working abilities that employers want our engineering graduates to have.”

ABET accreditation criteria also require an assessment process to ensure that program outcomes are consistent with ABET criteria. Two particular areas of concern for the ABET outcomes that are critically dependent on humanities and social science courses are discussed in the General Education Requirements section to follow. In addition, the College of Engineering to promote the maximum opportunity for success among entering freshmen. A success prediction indicator (SPI) is calculated for all incoming students. The SPI is calculated by multiplying the High School GPA by 10 and adding the resulting product to the three (3) SAT scores can be converted to an equivalent ACT score to perform this calculation.

The College of Engineering has embraced these program outcomes as valid and valuable indicators of educational program effectiveness. Thus, the College prepares students to demonstrate sufficiency and to strive for excellence in each of these areas. This goal is achieved by ensuring that instruction and other learning experiences are provided that will produce each program outcome. Engineering courses, mathematics and natural science courses, and the humanities and social sciences each provide essential contributions to the achievement of this goal. Program outcomes that are critically dependent on humanities and social science courses are discussed in the General Education Requirements section to follow. Additional program outcomes selected by individual degree programs to supplement ABET outcomes are also discussed in subsequent sections.

designation of a minor

An engineering undergraduate may declare a minor in a non-engineering subject area and have the minor listed on the permanent record under the following conditions:

1. Minors must be officially approved and described in the UT catalog. No unofficial minors will be recognized. Minors exist in aerospace engineering, environmental engineering, materials science and engineering, engineering communication and performance, architecture, business administration, and in numerous departments in agricultural science and natural resources and arts and sciences.
2. Courses taken to satisfy the minor may also be used to satisfy engineering degree requirements, provided that the courses would be a part of engineering degree requirements even if no minor was declared. Completion of a minor often involves the taking of some courses which cannot be used to satisfy the minimum requirement for an engineering degree.
3. A student should notify his or her advisor and major department office when beginning work on a minor. The interest to complete a minor must be declared at the time of application for a degree if the minor is to appear on the final transcript. Degree applications are handled by the UT Records Office.

COURSE LOAD

The maximum number of hours which can be taken by an undergraduate engineering student without special permission is 19. The Associate Dean for Academic Affairs must give permission to take 20 hours or more. In general, this decision is based on the student’s previous performance at UT.

GENERAL REQUIREMENTS

Students are advised to consult the University’s degree requirements as stated in the front section of this catalog as well as departmental requirements.

FRESHMAN PLACEMENT CRITERIA

Placement criteria are in effect for the College of Engineering to promote the maximum opportunity for success among entering freshmen. A success prediction indicator (SPI) is calculated for all incoming students. The SPI is calculated by multiplying the High School GPA by 10 and adding the resulting product to the sum of the three SAT scores can be converted to an equivalent ACT score to perform this calculation.
A pre-requisite for the first engineering course, Engineering Fundamentals 101, is a SPI of equal to or greater than 55, with a co-
requisite of Math 130 (pre-calculus) or higher math course. Math placement is determined by examination during orientation. Entering en-
gineering students are advised that the SPI pre-requisite or cannot qualify for placement in at least Math 130 have the following options:
• Attend the University of Tennessee sum-
mer session or another institution and complete a transferable math course equivalent to Math 130 (pre-calculus) with a grade of B or better
• Enroll in our engineering transition curricu-

mum that prepares students to begin EF 101 in their third semester.

TRANSFER STUDENTS
Transfer students, including internal UT transfers, must meet the minimum require-
ments stated below in order to be considered for admission to a major within the College.
1. Must have earned a minimum 2.30 cumulative grade point average (GPA) or its equivalent;
2. The overall record will be evaluated for quality and seriousness of purpose. An excess-
   sive number of withdrawals, incompletes, repeated courses, or failure may result in denial.
Any UT student desiring association with one of the departments of the College of Engi-
neering should go to the departmental office for the desired major. An interview with the depart-
ment head or his/her designee is held, with the major items of consideration being the same as
for external transfer students. If association is granted, a College/Major/Advisor Change form
is processed by the department to officially change the student’s academic home.

TRANSFER CREDIT
Every attempt will be made to give maxi-
mum credit for courses taken elsewhere and
transferred to the college. Discussions con-
cerning the evaluation of transfer credits should be conducted with the head of the department
(or designee) into which the student is to trans-
fer, but only those transferring the evaluation of
transfer credits by the Admissions Office.

Program for Second B.S. Degree
Upon approval by the Dean of Engineering and the Committee on Degrees of a program of
study recommended by the major engineering
department, a student who already holds a
bachelor’s degree may obtain a degree in engi-
neering upon meeting all of the course require-
ments of the selected engineering program. In
no case will the minimum requirement be less
than 30 semester credits. The prevailing
University regulations shall apply.

Satisfactory/No Credit Courses
Engineering majors may take half of the
minimum hours required (9) of general educa-
tion electives on a Satisfactory/No Credit (S/ NC) grading basis. No other courses specifi-
ced as part of the minimum degree require-
ments may utilize S/NC grading, unless a course is offered only on that grading basis. Students are encouraged to take courses of
interest which are not part of the minimum de-
gree requirements, and to fully utilize the S/NC grading option for such coursework.

CORRESPONDENCE COURSES
A student should check with his or her
major department to see what restrictions
there are, if any, on the use of correspon-
dence course credit to meet the minimum degree requirements.

GENERAL EDUCATION ELECTIVES
Engineering practice is shaped by many
non-technical considerations. Economic,
safety and ethical matters have long been of
concern. In recent years increasing influence
has been exerted by legal, political, govern-
mental, cultural, and international factors.
Courses in the humanities and social sciences
serve to meet the vital need for awareness and
knowledge of these influences on the engineer-
ing profession. In addition, they support the UT
general education goal to develop the basic
skills, knowledge, attitudes and judgment nec-
essary for effective citizenship, fulfilling per-
sonal interactions and an enriched personal
life. Lastly, ABET accreditation requirements
mandate a strong general education compo-
nent as a necessary part of achieving engineer-
ing program outcomes. Humanities and social science courses con-
tribute significantly to the educational objec-
tives of each engineering program and the
program outcomes desired of every engineer-
ning graduate. In fact, certain program out-
comes are critically dependent on contributions
from these courses. Thus, in the College of
Engineering, humanities and social science
courses do more than ensure adequate breadth in
the educational experience. They also comple-
ment and support engineering courses in
developing skills and providing experiences
critical to the practice of engineering.

Program outcomes supported by the gen-
eral education component in engineering cur-
rricula and a cluster of courses relevant to that
group are shown below. The first two out-
comes, (1) the broad education necessary to
understand the impact of engineering solutions in a global/societal context and (2) a knowl-
dedge of contemporary issues, have a funda-
mental relationship to humanities and social
science courses. All engineering students are
required to take at least one course from each of
these clusters. By engineering programs may specify up to two other clusters that are
required in their curriculum to ensure that each
program outcome is achieved by either engi-
neering coursework, general education elec-
trives, or a combination of the two.

General education requirements in English
composition, mathematics, and natural science
are fully satisfied by required courses in each
engineering curriculum. Electives from the
humanities and social sciences, in addition to
supporting selected engineering program out-
comes, must also meet UT general education
requirements for these areas of study. Thus,
to ensure general education compliance, engi-
neering students must take at least two
courses from the arts or humanities clusters;
one course from multicultural studies or a two
course foreign language sequence; and one
course from the sciences cluster. Addi-
tional general education electives can be
chosen from any cluster to provide breadth or
depth as desired by the student, but a mini-
mum of 18 semesters hours is required.

To be accepted as valid within the context
of the University general education require-
ments, each course should meet the generally
accepted definitions that (1) humanities are the
branches of knowledge concerned with human-
ity and culture; (2) the arts include performance
and/or analysis of the visual and written arts,
music or theatre, and (3) social sciences are the
studies of individual relationships in and to
society. Subject areas in the humanities
include history, English, philosophy, religion,
and classics. The arts will include courses in
music, art, theatre and creative writing. Subject
areas in the social sciences include sociology,
psychology, economics, anthropology, and
political science. Acceptability is determined
by course content, not by title or administrative

Examples of courses not acceptable in the
general engineering education program
include:
1. Language course in the subject’s native language;
2. Military science courses unless they are either on the approved list or
   officially equivalent to a course in the humanities
   or social sciences in another department;
3. Courses whose basic content is science or mathematics;
4. Engineering economy;
5. Professional courses in other fields—business, communications, etc.

A student is urged to seek guidance
from his or her advisor in choosing these
electives, since they are an important part
of the learning experience in preparation for
engineering practice. Choices should be
made on the basis of personal interest and
value in engineering practice. Up to 9 hours in
this category may be taken on an S/NC grading
basis. Credit earned by Advanced Placement
or courses transferred from another university
as “Satisfactory” are included in the 9 hour
limit. However, if more than 9 hours of general
education courses have been earned by AP or
transfer credit, students may apply for a waiver
of the 9 hour limit.

These requirements are not intended to
inhibit in any way the selection of courses to
be taken by a student while attending UT.
There may be courses of interest to a student
which are not included on the lists below, but
would be of great value in the student’s educa-
tion. Students are encouraged to consult with
their advisor in order to incorporate such
courses into their program of study.

The requirements for the general educa-
tion component of all engineering curricula are:
1. The minimum number of semester credit
   hours of acceptable courses is 18.
2. One course from the Engineering Practi-
   ce in a Global/Societal Context Cluster.
3. One course from the Contemporary
   Issues Cluster.
4. Other courses or clusters as estab-
   lished by departmental requirements to sup-
   port selected program outcomes.
5. A minimum of:
   a. Two courses from the Humanities or
      Arts clusters:
   b. One course from the Multicultural
      Studies Cluster or two foreign language
      courses:
   c. One course from the Social Sciences Cluster.
6. Courses may simultaneously meet more than one requirement (e.g. a multicultural course may also satisfy the Engineering Practice in a Global/Societal Context Cluster).

7. For a foreign language to be used in meeting general education requirements (a) at least two courses in the same language must be taken and (b) the language cannot be the native language of the student.

APPROVED GENERAL EDUCATION ELECTIVES

Courses included on the list below have been approved by the faculty as general education electives. Any course not on this list must be approved through the major department prior to enrollment in the course. Where such phrases as "any psychology course" are used, special topics courses in that area are specifically excluded since the content is variable. Students should seek approval from their advisor prior to enrollment in such special topic courses.

Engineering Practice in a Global/Societal Context Cluster

Contemporary Issues Cluster

African and African-American Studies 343, 364, 420, 429, 442, 473, 480, 483; Agriculture and Natural Resources 101, 333; American Studies 343, 345, 420; Anthropology 130, 320; Business Law 301; Child and Family Studies 220, 240, 240; Communications 100, 150; Geology 201, 202; History 320, 442, 446; Human Services 220; Philosophy 240, 230, 342, 344, 345, 346, 360, 362, 390; Political Science 311, 350; Religious Studies 319; Sociology 110, 340, 343, 344, 345, 360, 363, 375, 414, 415, 442, 446, 451, 462, 464; Speech Communication 465; University Studies 311, 321, 322; Women's Studies 220, 230, 310, 360, 375.

Multi-disciplinary Teams Cluster

Counselor Education and Counseling Psychology 206, 306; Psychology 360, 409, 440; Sociology 201, 320; Speech Communication 220, 230, 240, 300, 310, 320, 330, 420.

Professional and Ethical Responsibility Cluster

Military Science 420; Philosophy 240, 342, 344, 345; Religious Studies 344, 345; University Studies 322.

Effective Communications Cluster

English 263, 295, 355, 360, 455; Information Sciences 450; Journalism 450, 456; Speech Communication 210, 220; Theatre 220, 221. Any sequence of foreign language courses.

Life-Long Learning Cluster

Cultural Studies in Education 302, 451; Philosophy 110, 111; Psychology 310.

Aesthetics in Design Cluster

Humanities Cluster

Any British or American literature course. Any foreign language literature course including those using English translations. Any course from History, Philosophy, Medieval Studies or Religious Studies. Asian Languages 311, 312, 313, 314; Cinema Studies 281, 323, 325, 334, 420, 421, 433, 465; Classics 221, 222, 253; Comparative Literature 202, 203; Women's Studies 210, 215, 320, 383.

Arts Cluster

Architecture 111; Art History 172, 173, 183; Classics 232, 233; English 263, 363; Music*; Music History 110, 115, 120, 210, 220, 290, 310, 330, 340, 341, 350, 380, 390; Philosophy 350, 353; Theatre 100, 220*.

* Courses involving skill development in the arts (Art 191, Theatre 220 or music courses that include vocal or instrumental performance) may be used as General Education Elective up to maximum of 3 semester hours.

Multicultural Studies Cluster

Any sequence of foreign language courses. Any course from African and African-American Studies, Latin American Studies, American Studies 310, 343; Anthropology 130, 313, 315, 319, 320; Asian Studies 101, 102, 322, 323, 373, 374, 376, 379, 381, 383; Business Administration 311; Economics 321, 323; Geography 320; Political Science 365, 452, 454, 459, 463; Religious Studies 101, 102, 232, 333, 373, 374, 376, 379, 381, 383; Women's Studies 360.

Social Sciences Cluster

AMERICAN HISTORY REQUIREMENT

Engineering students, regardless of national origin, must fulfill the American history requirement described elsewhere in this catalog. Those students who have not had the required year of American history in high school may choose the required six semester hours from History 221 and 222, or other courses deemed suitable by the Department of History. These hours may be counted as part of the required block of humanities and social science electives.

TECHNICAL ELECTIVES

Technical electives are to be selected with the advice and approval of the student's major department. In some of the curricula tabulations, a choice of such electives is indicated, and regulations in regard to their selection are stated.

THE VOLUNTARY ROTC PROGRAM

Engineering students may participate in the ROTC Program. Advanced ROTC courses (300 and 400 series) may be counted as technical elective credit toward an engineering degree up to a total of six (6) semester hours. Normally, Military Science courses cannot be used as humanities/social science electives. Individual departments determine the appropriate substitutions.

APPROVAL OF ELECTIVES AND SUBSTITUTIONS

Each student shall discuss with an advisor the status of the program of study no later than the beginning of the second semester prior to anticipated graduation. Any necessary additions to or substitutions in the program, or electives requiring special approval, must be cleared in writing at that time, and it is each student's responsibility to see that all necessary approvals are secured. Inattention to such matters will most likely delay graduation.

ENGINEERING FUNDAMENTALS DIVISION

Professors: J.R. Parsons (Mechanical, Aerospace and Biomedical Engineering), Director; R.M. Bennett (Civil and Environmental Engineering); J.H. Forrester (Mechanical, Aerospace and Biomedical Engineering); O. Solomon (Mechanical, Aerospace and Biomedical Engineering).

Associate Professors: C.D. Ponke (Mechanical, Aerospace and Biomedical Engineering); D. Raj Raman (Agricultural and Biosystems Engineering); T.H. Scott (Nuclear Engineering); J.E. Seat (NSF Research Associate Professor), Ph.D. Tennessee; T.H. Scott (Nuclear Engineering); F.E. Weber (Chemical Engineering); D.C. Yoder (Agricultural and Biosystems Engineering).

The Engineering Fundamentals Division is the academic home for all first year engineering students. Located in Estabrook Hall, the Division serves as a focus for all freshman student activities. The faculty of the Division act as academic advisors and teach the principal courses in Engineering Fundamentals. These courses are designed to prepare students for entry into the Sophomore year of every degree program in the College. Academic standards in the first year are necessarily high. To assist students with deficient academic backgrounds in the necessary math and computer skills, supplementary courses are offered as needed.

No degree is awarded by the Engineering Fundamentals Division. The division co-advises, in conjunction with the College of Education, the Engineering and Communication and Performance Minor for engineering students desiring additional training and certification in team facilitation and organizational communication.
New freshman students are assigned to the Engineering Fundamentals Division for academic advising and career counseling until they have completed the freshman curriculum. Freshman students admitted to the College of Engineering are required to designate a field of study by the end of their freshman year. As sophomores, students are assigned faculty advisors in their selected departments.

**BIOSYSTEMS ENGINEERING**

(See College of Agricultural Sciences and Natural Resources)

**CHEMICAL ENGINEERING**

Professors: J.R. Collier (Head), Ph.D. Case Institute of Technology; P.R. Bienkowski, Ph.D. Purdue; H.D. Cochran (Adjunct), Ph.D. Massachusetts Institute of Technology; R.M. Counce, Ph.D. Tennessee; P.T. Cummings (Distinguished Scientist), Ph.D. U. of Melbourne (Australia); J.M. Holmes (Emeritus), Ph.D. Tennessee; C.F. Moore (Distinguished Service Professor), Ph.D. Louisiana State; J.W. Prados (Emeritus), Ph.D. Tennessee; PE; J.S. Watson (Adjunct), Ph.D. Tennessee.

Associate Professors: J.S. Arnold (Adjunct), Ph.D. Tennessee; D.D. Bruns, Ph.D. Houston; B.J. Edwards, Ph.D. Delaware; P.D. Frymier, Ph.D. Virginia; S. Perovan (Research) Ph.D. Iasi Tech; T.-W. Wang, Ph.D. Massachusetts Institute of Technology; F.E. Weber, Ph.D. Minnesota.

Assistant Professors: D.J. Keffer, Ph.D. Minnesota.

**BACHELOR OF SCIENCE PROGRAM**

Chemical engineering deals with the development, design, operation, and management of plants and processes for economical, safe conversion of chemical raw materials to useful products. It is a multidisciplinary profession with heavy emphasis on chemistry and mathematics, with supporting study in areas such as physics, materials, and humanities.

Chemical engineering graduates of the University of Tennessee possess the knowledge base, intellectual skills, and professional commitment that prepare them for innovative technical leadership, graduate study, productive service to society, and continued professional growth through lifelong learning. Preparation is based in the learning objectives identified below, regular evaluation of the achievement of these objectives, and use of evaluation results to improve the educational process.

**Technical Knowledge Base:** Graduates of the UT chemical engineering program demonstrate the ability to apply knowledge of mathematics, chemistry, other sciences, and engineering to identify and solve problems dealing with material and energy balances applied to chemical processes; thermodynamics of physical and chemical equilibria; heat, mass, and momentum transfer; continuous and stagewise separation operations; chemical kinetics and reactors; and process dynamics and control.

**Analytical Skills:** Graduates of the UT chemical engineering program demonstrate the ability to apply the following analytical skills in the solution of engineering problems: differential and integral calculus, ordinary differential equations, linear algebra, statistical methods, and numerical methods.

**Problem Formulation and Solution Skills:** Graduates of the UT chemical engineering program demonstrate the ability to formulate a technical problem that permits a solution, identify the appropriate tools to address a technical problem, make simplifying assumptions required to allow a solution with an appropriate level of rigor, identify and collect information needed to obtain the solution, and evaluate the reasonableness of the solution.

**Experimental Skills:** Graduates of the UT chemical engineering program demonstrate the ability to plan experiments to meet specified objectives, conduct such experiments carefully and safely, and analyze and interpret experimental data in terms of process models.

**Communication Skills:** Graduates of the UT chemical engineering program demonstrate the ability to apply computer skills in engineering problem solving. These include computation, communication, and data acquisition skills that keep pace with evolving technology.

**Process Design and Synthesis Skills:** Graduates of the UT chemical engineering program demonstrate the ability to formulate and solve open-ended problems that require evaluation of alternatives with respect to specified criteria; size equipment to meet process objectives; apply the principles of engineering economics to estimate capital investment and operating costs for specified process equipment and systems; develop an appropriate flowsheet to meet a process objective; calculate the material and energy balances for a given process flowsheet; employ computer-based process design tools and techniques; optimize the design of a conceptual process with respect to specified criteria that include safety, environmental impact, operability, and economics; and analyze and compare alternative designs.

**Safety, Health, and Environmental Protection:** Graduates of the UT chemical engineering program demonstrate an understanding of chemical process safety, including occupational safety and health and minimization of adverse environmental impact.

**Understanding of the Cultural Heritage:** Graduates of the UT chemical engineering program demonstrate an appreciation for the human cultural heritage.

The curriculum provides a central core of required courses with flexibility in the upper-division years to permit emphasis on preparation for graduate school or professional employment.

**DEPARTMENTAL GRADUATION REQUIREMENTS**

To graduate in chemical engineering, students must complete the published curriculum with a grade of C or better in all required chemical engineering courses. A minimum of 18 semester hours of general education courses are required. These courses must meet the college general education requirements listed under “Curricula in Engineering.” A 3 semester-hour technical writing course must be included in the general education electives.

**HONORS PROGRAM**

The honors program encourages highly motivated students to experience a more rigorous preparation in chemical engineering. Admission is selective. Application to the honors program is made when the student applies for upper division status. Honors requirements are: credit for 3 of the 4 honors seminars (CHE 307, 308, 407 and 408), CHE 447, one of CHE 467, 477, 488 or 498 as a technical elective and Chem 463 as a chem option. Students interested in the honors program should consult the department’s honors coordinator.

**PROGRESSION TO UPPER DIVISION**

Progression of chemical engineering students to departmental upper division courses is competitive and is based on capacity. Factors considered include overall grade point average, performance in selected lower division courses and evidence of satisfactory and orderly progress through the prescribed curriculum.
**Upper-Division Status**: A lower-division student may apply for progression to Upper-Division Status after completing ChE 200, 230, 240 and 250 with a grade of C or better in each course and an overall GPA of 2.5 or better.

**Provisional Status**: Students who have completed ChE 200, 230, 240, and 250 with an overall GPA of at least 2.1 may apply for provisional status. The granting of Provisional Upper-Division Status is based on the availability of space in the departmental programs after Upper-Division Status students have been accommodated. Provisional students are required to demonstrate the ability to perform satisfactorily in upper division courses by completing a total of seven departmental courses with a grade of C or better in each course (including the four required for Upper-Division Status). Permission to continue with upper-division classes depends on this minimum level of performance.

Any student with an overall GPA below 2.1 will not be admitted to upper division Chemical Engineering courses. Students who have not been admitted to Upper-Division or Provisional Status will be dropped from upper-division departmental class rolls.

Transfer students at the upper-division level are admitted on a Provisional Status basis only.

**GRADUATE STUDY PROGRAM**

Graduate programs leading to the degrees of Master of Science and Doctor of Philosophy in Chemical Engineering are offered. The University’s Graduate School operates a Resident Graduate Program at Oak Ridge and Kingsport. See the Graduate Catalog for detailed information.

**CIVIL AND ENVIRONMENTAL ENGINEERING**

**Professors**: G.D. Reed (Condra Professor and Head), Ph.D., P.E., Arkansas; R.M. Bennett, Ph.D., P.E., Illinois; E.G. Burdette (Fred N. Peebles Professor), Ph.D., P.E., Illinois; A. Chatterjee, Ph.D., P.E., North Carolina State; W.T. Davis, Ph.D., Tennessee; J.H. Deatherage, Ph.D., P.E., Arizona; D.W. Goodpasture, Ph.D., P.E., Illinois; W.L. Grecco (Emeritus), Ph.D., Michigan State; K.W. Heathington (Emeritus), Ph.D., Northwestern; J.B. Humphreys, Ph.D., Texas A&M; W.A. Miller (Emeritus), Ph.D., P.E., Georgia Institute of Technology; R.B. Robinson (Fisher Professor), Ph.D., P.E., Iowa State; B.A. Tschantz (Emeritus), ScD., P.E., New Mexico State; T. Urbanik, Ph.D., Texas A&M; J. Wegmann, Ph.D., Northwestern.

**Associate Professors**: C.D. Cox, Ph.D., Penn State; L.D. Han, Ph.D., California (Berkeley); T.L. Miller, Ph.D., Tennessee; D. Penamadu, Ph.D., Georgia Tech; S.H. Richards, Ph.D., P.E., Tennessee; K.G. Robinson, Ph.D., VPI; R.F. Tiry (Emeritus), B.S. Marquette.

**Assistant Professors**: K.H. Chu, Ph.D., California (Berkeley); B. Huang, Ph.d. LSU.

**BACHELOR OF SCIENCE PROGRAM**

The department offers a Bachelor of Science degree with a major in Civil Engineering, accredited by the Accreditation Board for Engineering and Technology (ABET).

**UNDERGRADUATE EDUCATION MISSION**

To prepare students to enter the general practice of Civil Engineering and/or pursue graduate education, the department’s undergraduate education mission is to provide a high-quality teaching and learning environment in recognized areas of civil engineering with proficiency in environmental, geotechnical, structural, transportation, and water resources engineering.

**EDUCATIONAL OBJECTIVES**

To ensure a high quality and stimulating learning environment, the department strives to do the following: attract highly-qualified and motivated students; provide a highly competent faculty, dedicated to undergraduate instruction; control class size to facilitate a high-quality learning environment; provide state-of-the-art teaching and laboratory equipment/facilities; and foster strong bonds of faculty-student interaction through seminars, extracurricular activities, personal advising and consultation.

To ensure that students have exposure to the practice of Civil Engineering, the department strives: to provide cooperative education and internships; to encourage professional society participation; to consult an external advisory board of practitioners to assist with the development of the curriculum; to provide a senior design project including meaningful engineering design experiences; to maintain national engineering accreditation; and to maintain a high passing rate on the first professional licensing examination.

The department strives to ensure graduates will compete favorably in the marketplace for opportunities in the practice of civil engineering and/or graduate education: by providing professional courses to achieve proficiency in the five areas listed in the mission statement; fostering an appreciation for professional development and life-long learning; providing an undergraduate education recognized for its excellence both statewide and nationally; and providing professional development opportunities consistent with current engineering practice.

The curriculum in Civil Engineering provides training in fundamental engineering sciences and in basic subjects in related fields. Technical electives are available in construction, environmental engineering, geotechnical, material, structures, transportation, or water resources.

Graduate students are required to maintain a cumulative grade point of at least 2.00 in all Civil Engineering and Environmental Engineering courses taken at the University of Tennessee and used to satisfy the graduation requirements. No more than six hours of Civil and Environmental Engineering courses in which a D is the highest grade earned may be counted toward graduation.

**ELECTIVES**

Electives are chosen to meet student career objectives and program accreditation requirements. Students must consult with their advisor and have their selections pre-approved. A student must have a GPA of 2.75 or higher or approval of the instructor to take 500-level courses for undergraduate credit.

**ENVIRONMENTAL ENGINEERING MINOR**

The College of Engineering offers a minor in Environmental Engineering to those undergraduate students whose academic history provides the prerequisites for the courses required in the minor. The minor requires the completion of a minimum of 21 credits in course work which builds the foundation of an environmental engineering perspective. Some of the courses used in the minor may also satisfy a requirement for a major. Students are advised that the first professional degree in Environmental Engineering at the University of Tennessee is the M.S. in Environmental Engineering which builds on the minor.

**COURSE REQUIREMENTS**

**Choose One:**
- CHEM 230 Inorganic Chemistry
- CHEM 310 Analytical Chemistry
- CHEM 350 Organic Chemistry

**Required:**
- MICR 210 General Microbiology

**Choose Two:**
- ChE 200 Chemical Engineering Fundamentals
- BE 243 Material and Energy Flow in Bio Systems
- CE 380 Water and Wastewater Treatment
- CE 395 Hydrology or ECE 315 Soil and Water Conservation

**Choose One:**
- GEOL 202 Earth as an Ecosystem
- PHIL 346 Environmental Ethics

**Choose One:**
- GEOL 485 or CE 485 Hydrogeology
- PSS 415 Soil Hydrology

**Required:**
- CE 486 Air and Waste Management

Students are asked to file their intent to complete the Minor with the office of the Department of Civil and Environmental Engineering, 223 Perkins Hall. The student’s home department advisor will then be supplied with the information about the Minor requirements to assist with prerequisite sequencing. A copy will be filed with undergraduate records so the Minor, once completed, will be shown on the student’s transcript.

**MASTER OF SCIENCE PROGRAM**

Graduate programs in Civil Engineering and Environmental Engineering leading to the degrees of Master of Science are offered to graduates of recognized undergraduate curricula.

The general requirements for the masters’ degrees are stated in the Graduate Catalog.

**DOCTORAL PROGRAM**

Graduate work leading to the degree of Doctor of Philosophy with a major in Civil Engineering is offered. Major fields of study include environmental engineering, geotechnical/materials, structural engineering, transportation, and water resources.

The general requirements for the doctoral degree are stated in the Graduate Catalog.
ELECTRICAL AND COMPUTER ENGINEERING

Professors: W.T. Snyder (Chancellor Emeritus and Acting Head), Ph.D. Northwestern; M. Abidi (Weston Fulton Professor), Ph.D. Tennessee; J.D. Birdwell, Ph.D. Massachusetts Institute of Technology; B.K. Bose (Condra Chair of Excellence), Ph.D. Calcutta; D.W. Bouldin, Ph.D. Vanderbilt; M.O. Pace, Ph.D. Georgia Institute of Technology; P.E.; J.S. Lawler, Ph.D. Michigan State; A. Pujol (UTSI), Ph.D. Vanderbilt; M.J. Roberts, Ph.D. Tennessee; J.R. Roth (Weston Fulton Professor), Ph.D. Cornell.

Associate Professors: B.W. Bomer (UTSI), Ph.D. Tennessee; P.B. Crilly, Ph.D. New Mexico State; S.K. Islam, Ph.D. Connecticut; R.D. Joseph (UTSI), Ph.D. Case Institute of Technology; D.B. Koch, Ph.D. Missouri-Rolla.

Assistant Professors: B.J. Bialek, Ph.D. Georgia Tech; J.N. Chiasson, Ph.D. Minnesota; M.M.K. Howlader, Ph.D. Virginia Polytechnic Institute; S.-G. Kong, Ph.D. Harvard; Th.D. Washington University; H. Qi, Ph.D. North Carolina State; L.M. Smith (UTSI), Ph.D. Tennessee; P.W. Smith, Ph.D. Virginia; L.M. Tolbert, Ph.D. Georgia Institute of Technology.

BACHELOR OF SCIENCE PROGRAMS

GOALS
The goals of the B.S. degree programs in electrical and computer engineering are to: (a) prepare students for entry into the profession; (b) instill in students the capabilities required by the discipline, the recognition of the need to enhance the discipline, and the desire for lifelong learning; and (c) equip students with a general knowledge of technical and non-technical disciplines so that they are prepared for further study in other fields including professional and graduate education.

The B.S. degree programs are based on a series of integrated courses. Students advance through the program in a sequential manner guided by prerequisite and co-requisite site courses in the showcase curriculum. This integrated sequentially developed program is highlighted by the systemic inclusion of the design process introduced in the sophomore year.

PROGRAM EDUCATIONAL OBJECTIVES
The program educational objectives of the Electrical and Computer Engineering programs include: (1) an understanding of the engineering sciences necessary to analyze and design complex devices and systems containing hardware and software components; (2) an understanding of mathematics through differential and integral calculus and differential equations; (3) an understanding of probability and statistics, including applications; (4) an understanding of linear algebra, numerical analysis, and advanced calculus; (5) an understanding of the basic sciences including chemistry and physics; (6) a progression of design projects and tasks throughout the program; (7) an orderly student progression through the program; and (8) achievement of all eleven Program Outcomes common to all engineering disciplines and the two additional department specified outcomes. See Program Outcomes below.

PROGRAM OUTCOMES
In addition to the eleven program-outcomes listed in the College of Engineering section on National Accreditation (listed on page 104), electrical and computer engineering program outcomes also include (a) experience in using organizational skills in team management and negotiation; and (b) ability to use creative and technical skills in analytical problem solving in the discipline and other engineering related fields. Both Electrical and Computer Engineering programs are under continuous assessment and improvement based on Engineering Criteria 2000. The Advisory Committee to the department, which is made up of persons from industry, government, higher education, students and recent graduates, and faculty, provides constituent input for setting program educational objectives and outcomes and establishing the requisite assessment modes for the program.

GENERAL
The core courses of study for the B.S. degree in Electrical Engineering and B.S. degree in Computer Engineering are structured to provide a foundation in both the basic sciences and the specialized areas of their respective discipline. The programs also have sufficient general education electives to enhance the cultural growth of the student and develop professionals with a strong social awareness. The faculty seeks to keep classes small enough to allow effective interaction with students.

The selection of general education elective courses is left to each student but must be made in accordance with the established College of Engineering Policy. Students are required to satisfy the following general education cluster distribution requirements: Engineering in a Global/Societal Context cluster (1 course), Contemporary Issues cluster (1 course), Humanities/Arts cluster (1 course), Multicultural cluster (1 course), 2 if a foreign language), and Social Sciences cluster (1 course), and Professional and Ethical Responsibility cluster (1 course). Generally all sophomore and junior level courses taught in the department are taught every semester. Senior level courses are normally offered in either the fall or spring semester. Courses for which a senior course is a prerequisite will be normally offered in the spring semester with the prerequisite senior course being offered in the fall semester. In all courses which have prerequisites indicated, the prerequisite must be completed prior to enrollment in the course. This scheduling arrangement allows for flexibility since the student may elect the normal four-year schedule, an accelerated schedule, or choose to participate in the Cooperative Engineering Program.

The Electrical and Computer Engineering Department maintains a number of laboratory facilities to support the undergraduate teaching program. The laboratories are devoted specifically to circuits and systems, communications, computer networks, digital systems, electronics, image processing, machinery, machines, and power electronics and drives. Microcomputer and personal computer facilities are provided within the department.

COMPUTER ENGINEERING
Students in the junior and senior years may choose from a wide spectrum of courses covering various aspects of electrical and computer engineering, computer science, and related fields. Students must meet the design, depth, and breadth requirements in the department in their selection of these courses. Students are encouraged to discuss an appropriate senior program with their advisors.

To be eligible for the Bachelor of Science degree in Computer Engineering, a student must achieve a cumulative grade point average of at least 2.0 in all ECE courses taken at the University of Tennessee. At least 30 hours of upper division courses in Electrical and Computer Engineering, and Computer Science must be earned at the University of Tennessee.

ELECTRICAL ENGINEERING
Students in the senior year may choose from a wide spectrum of courses covering all aspects of Electrical and Computer Engineering. Students must meet the design, depth, and breadth requirements of the department in their selection of these courses. The design requirement is met through a major engineering design experience in ECE 400, Senior Design, and through the design process being integrated into specified courses throughout the program. The depth requirement is met by taking two courses in one of the five core areas of communications, computers, electronics, power, and systems. The breadth requirement is met by taking courses in other core areas, or courses in computer vision, power electronics, and emerging technologies. Students are encouraged to discuss an appropriate senior program with their advisors.

To be eligible for the Bachelor of Science degree in Electrical Engineering, a student must achieve a cumulative grade point average of at least 2.0 in all ECE courses taken at the University of Tennessee. At least 30 hours of upper division ECE courses, including ECE 400, and courses to meet the depth, and breadth requirements of the department must be earned at the University of Tennessee.
GRADUATE STUDY PROGRAM

Comprehensive course and research programs for the degrees of Master of Science and Doctor of Philosophy in electrical engineering are offered for students with career goals such as advanced design, research, and teaching. Students admitted to the graduate program are expected to have a minimum grade point average of 3.0 for all undergraduate study, and for the senior year. Students with a B.S. or B.A. degree in a field other than Electrical Engineering are required to take certain ECE undergraduate courses before beginning the graduate program. See the Graduate Catalog for complete details on the graduate program.

The ECE Department has a long-standing tradition of research excellence in analog and mixed-signal integrated circuits, computer vision, image processing, information processing, industrial plasma engineering, power electronics, and sensors. Various government agencies, laboratories, and industrial partners support research of the ECE faculty at a level of approximately $3.5M per year. The campus is located within the vicinity of the Oak Ridge National Laboratory (ORNL). The ECE Department sustains a strong link with ORNL in their efforts at advancing the nation’s energy resources, scientific knowledge, educational foundations, and economic competitiveness.

ENGINEERING PHYSICS

Soren P. Sorensen, Head
Stuart B. Elston, Coordinator

Engineering physicists typically work in areas of applied science and emerging technology in which standard engineering practices are rapidly evolving to keep pace with advances in science; they are often involved in developing new engineering methods and principles. The goal of the Engineering Physics B.S. program is to prepare its students to apply the principles and problem-solving approaches of physics to the solution of engineering problems at the frontiers between science and technology, by:

1. providing students with a thorough knowledge of mathematics, science, and engineering science with an emphasis on the principles of physics and of the derived physical, chemical, and biological sciences as appropriate to individual career goals;
2. training students in the communication, team cooperation, and problem identification and solving skills needed to practice engineering art in the modern world;
3. preparing students through example and experience to apply those principles and skills to the design and conduct of experiments, to the analysis and interpretation of measured results, and to the design of components, processes, and systems that meet specific, identified needs; and
4. instilling in students understanding and appreciation of the cultural, historical, societal, economic, and environmental contexts in which problems of engineering and science arise, and to promote commitment to seek solutions which achieve appropriate balance of cultural, social, and technical value.

The program in Engineering Physics is designed to fulfill the educational requirements for professional work in various fields of applied science which are based upon a thorough knowledge of physics. The first two years of the curriculum are concerned with fundamental courses in engineering, science, mathematics, and general education. In the upper division, the curriculum allows some choice of courses in engineering and in physics depending on the interest and career goals of the student. The undergraduate program is a complete, professional program, equipping the student for entry into a variety of work in industry and research. The program also leads to graduate work in either physics or engineering.

ENVIRONMENTAL ENGINEERING
(See Civil Engineering)

INDUSTRIAL ENGINEERING

Professors:
A.B. Badiri (Head), Ph.D. Central Florida, P.E.;
W.W. Claycombe (Emeritus), Ph.D. Virginia Polytechnic Institute, P.E.; G.W. Garrison (UTSI), Ph.D. North Carolina State; H.L. Loveless (Emeritus), M.S. North Carolina State, P.E.; J.A. Bontadelli (Emeritus), Ph.D. Ohio State, P.E.

Associate Professors:

Assistant Professors:
R.E. Ford, Ph.D. Tennesse; G.D. Coleman (UTSI), Ph.D. Virginia Tech P.E.; D. Kim, Ph.D. Florida; D. Kong, Ph.D. Penn State; T. A. Kress, Ph.D. Tennesse.

The undergraduate curriculum in industrial engineering provides a strong background in both fundamental engineering principles and the analytic methods necessary for solving the multi-faceted problems associated with the production, maintenance, and delivery of goods and services. In particular, this curriculum emphasizes the knowledge and skills necessary to design integrated systems of people, materials, equipment and energy, such that the overall systems functions at an optimal level and such that the needs of human components of the system are met. The solid, broad base in engineering, combined with education in applying engineering methodology to traditionally non-engineering problem areas as provided through the Industrial Engineering curriculum, leads to participation by Industrial Engineers in an unlimited range of fields; including, among others, retail distribution, banking, health care delivery, corporate management, municipal management, food industry, as well as traditional areas of manufacturing.

OUTCOMES

The eleven program outcomes listed in the College of Engineering section on National Accreditation are the accepted outcomes of the Industrial Engineering Department.

UNIVERSITY OF TENNESSEE GENERAL EDUCATION REQUIREMENTS

Industrial Engineering students are required to take Economics 201 and two English electives. They must select the remainder of their humanities/social science elective courses to satisfy the University of Tennessee General Education Requirements in accordance with the established College of Engineering Policy. An Industrial Engineering advisor will assist the student in selecting courses to meet these requirements.

GRADUATE STUDY PROGRAMS

The Department of Industrial Engineering offers a graduate program leading to the Master of Science degree with a major in Industrial Engineering, concentrations in traditional industrial engineering, engineering management, manufacturing systems engineering, and product development and manufacturing. The Ph.D. with a major in Engineering Science is available through the Department of Engineering Science and Mechanics with a specialization in Industrial Engineering.

OBJECTIVES

The objectives of the Industrial Engineering Program include enabling the students to obtain:

(a) An understanding of fundamental engineering principles, mathematics, science, and statistics.

(b) An understanding of and an ability to apply the following concepts to the multi-faceted problems associated with the production of, maintenance, and delivery of goods and services: fundamental human factors which influence engineering design, the economic analysis of alternative design choices, introductory economics and accounting, quality control techniques, manufacturing processes and materials, production and inventory system design and control, the mathematical modeling and simulation of complex systems, and the design and installation of information acquisition and control systems.

(c) An ability to communicate effectively, both orally and in writing, to function on multidisciplinary teams, to have a knowledge of pertinent contemporary issues, and to recognize the need for a commitment to life-long learning.

This curriculum emphasizes the knowledge and skills necessary to design integrated systems of people, materials, equipment and energy, such that the overall systems functions at an optimal level and such that the needs of human components of the system are met. The solid, broad base in engineering, combined with education in applying engineering methodology to traditionally non-engineering problem areas as provided through the Industrial Engineering curriculum, leads to participation by Industrial Engineers in an unlimited range of fields; including, among others, retail distribution, banking, health care delivery, corporate management, municipal management, food industry, as well as traditional areas of manufacturing.

OUTCOMES

The eleven program outcomes listed in the College of Engineering section on National Accreditation are the accepted outcomes of the Industrial Engineering Department.

UNIVERSITY OF TENNESSEE GENERAL EDUCATION REQUIREMENTS

Industrial Engineering students are required to take Economics 201 and two English electives. They must select the remainder of their humanities/social science elective courses to satisfy the University of Tennessee General Education Requirements in accordance with the established College of Engineering Policy. An Industrial Engineering advisor will assist the student in selecting courses to meet these requirements.

GRADUATE STUDY PROGRAMS

The Department of Industrial Engineering offers a graduate program leading to the Master of Science degree with a major in Industrial Engineering, concentrations in traditional industrial engineering, engineering management, manufacturing systems engineering, and product development and manufacturing. The Ph.D. with a major in Engineering Science is available through the Department of Engineering Science and Mechanics with a specialization in Industrial Engineering.

OBJECTIVES

The objectives of the Industrial Engineering Program include enabling the students to obtain:

(a) An understanding of fundamental engineering principles, mathematics, science, and statistics.

(b) An understanding of and an ability to apply the following concepts to the multi-faceted problems associated with the production of, maintenance, and delivery of goods and services: fundamental human factors which influence engineering design, the economic analysis of alternative design choices, introductory economics and accounting, quality control techniques, manufacturing processes and materials, production and inventory system design and control, the mathematical modeling and simulation of complex systems, and the design and installation of information acquisition and control systems.

(c) An ability to communicate effectively, both orally and in writing, to function on multidisciplinary teams, to have a knowledge of pertinent contemporary issues, and to recognize the need for a commitment to life-long learning.

This curriculum emphasizes the knowledge and skills necessary to design integrated systems of people, materials, equipment and energy, such that the overall systems functions at an optimal level and such that the needs of human components of the system are met. The solid, broad base in engineering, combined with education in applying engineering methodology to traditionally non-engineering problem areas as provided through the Industrial Engineering curriculum, leads to participation by Industrial Engineers in an unlimited range of fields; including, among others, retail distribution, banking, health care delivery, corporate management, municipal management, food industry, as well as traditional areas of manufacturing.

OUTCOMES

The eleven program outcomes listed in the College of Engineering section on National Accreditation are the accepted outcomes of the Industrial Engineering Department.

UNIVERSITY OF TENNESSEE GENERAL EDUCATION REQUIREMENTS

Industrial Engineering students are required to take Economics 201 and two English electives. They must select the remainder of their humanities/social science elective courses to satisfy the University of Tennessee General Education Requirements in accordance with the established College of Engineering Policy. An Industrial Engineering advisor will assist the student in selecting courses to meet these requirements.

GRADUATE STUDY PROGRAMS

The Department of Industrial Engineering offers a graduate program leading to the Master of Science degree with a major in Industrial Engineering, concentrations in traditional industrial engineering, engineering management, manufacturing systems engineering, and product development and manufacturing. The Ph.D. with a major in Engineering Science is available through the Department of Engineering Science and Mechanics with a specialization in Industrial Engineering.
Students who enroll in the Master of Science degree may select a concentration in either Industrial Engineering, Engineering Management, or Manufacturing Systems Engineering. In manufacturing, a dual degree program leading to an MBA and MSIE is available. Admission is open to graduates of ABET-accredited undergraduate curricula in engineering, or to graduates of other technical curricula who satisfy prerequisites depending on their academic backgrounds and industrial experiences. Policies concerning prerequisite requirements are determined by the Industrial Engineering faculty.

NOTE: Any 400-level course required in the Bachelor of Science in Industrial Engineering program at UT may not be used for graduate credit in the M.S. degree program.

INDUSTRIAL ENGINEERING AND MANUFACTURING SYSTEMS ENGINEERING

Under the Industrial Engineering and Manufacturing Systems Engineering Concentration, students may select either the thesis or non-thesis option. The thesis option requires 24 hours of coursework and 6 hours thesis. The non-thesis option requires 30 hours of course work plus a 3-hour industrial design project.

Depending upon a student’s background and career objectives, graduate work in Industrial Engineering enables the student to select an area of specialization from operations research, human factors engineering, quality engineering, maintenance and reliability engineering, or general industrial engineering. In addition to the Concentration in manufacturing systems engineering, a dual degree program, requiring a total of 67 semester hours of coursework, is available in product development and manufacturing, and leads to an MBA and an MS degree.

It is also possible in either concentration for a student to select minors in engineering, mathematics, psychology, business, computer science, statistics, or economics.

ENGINEERING MANAGEMENT

The Engineering Management Concentration has an admission requirement of two years’ industrial experience as a practicing engineer or scientist, or current full-time employment in an appropriate engineering or applied science position. The program is non-thesis and requires 33 hours of course work plus a 3-hour capstone project.

MATERIALS SCIENCE AND ENGINEERING

Professors:
Raymond A. Buchanan (Interim Head), Ph.D. Vanderpilt, P.E.; R.S. Benson, Ph.D. Florida State; C.R. Brooks (Emeritus), Ph.D. Tennessen; Edward S. Clark (Emeritus), Ph.D. California; N.B. Dahorte (UTSI), Ph.D. Michigan State; J.F. Fellers (Emeritus), Ph.D. Akron; Easo P. George, Ph.D., Pennsylvania; Marion G. Hansen, Ph.D. Wisconsin; P.K. Liaw (Racheff Chair of Excellence), Ph.D. Northwestern; Douglas H. Lowndes, Ph.D. Colorado; Carl D. Lundin, Ph.D. Rensselaer; Carl J. McHargue, Ph.D. Kentucky; Ben F. Oliver (Emeritus), Ph.D. Penn State; A.J. Pedraza, Ph.D. LaPlata (Argentina); George M. Pharr, Ph.D. Stanford, P.E.; Paul J. Phillips, Ph.D. Liverpool (UK); Joseph E. Spruiell, Ph.D. Tennessee; E.E. Stansbury (Emeritus), Ph.D. Cincinnati.

Associate Professors:
William T. Becker (Emeritus), Ph.D. Illinois; Thomas T. Meek, Ph.D. Ohio State.

Assistant Professor:
Hahn Choo, Ph.D. Illinois Institute of Technology; Kevin Kit, Ph.D. Deluxe; Phillip D. Rack, Ph.D. Florida; Claudia J. Raw, Ph.D. Arizona.

BACHELOR OF SCIENCE PROGRAM

Materials Science and Engineering is concerned with the science and technology needed to develop and apply materials for the benefit of society. The undergraduate program is designed to prepare students to undertake materials science and engineering careers or to enter graduate programs in this or related disciplines. In order to accomplish this overall goal, the specific educational objectives of the program for the degree of B.S. in Materials Science and Engineering are:

1. To provide students with a knowledge of the fundamentals of appropriate physical and chemical sciences, mathematics, and engineering sciences, and to demonstrate the applications of these principles to solving engineering problems with an emphasis on the materials processing, structure, properties, and performance. This knowledge base includes the development of analytical and experimental skills.

2. To provide students with experiences in design and materials selection such that they can design components, systems, or processes with consideration of economic, safety, environmental, and social issues.

3. To develop professional skills in such areas as written and oral communication, problem-solving, and working in diverse teams that prepare graduates to practice materials engineering in contemporary and global environments.

4. To provide students with a general education component that complements the technical content, for the appreciation of cultural and social values, for understanding the impact of engineering solutions on society, and for personal development.

The field of Materials Science and Engineering is quite broad, encompassing metallic, ceramic, and polymeric materials, as well as composites made from combinations of materials. Consequently, the curriculum contains a central core of courses that are applicable to all materials types with flexibility in the upper division years to permit concentration and in-depth coverage of specific materials categories. By judicious choice of electives the student may get a broad perspective or may develop a specialty area.

A minimum of 18 semester-hours of general education courses are required by all engineering degree programs in order to meet the UT general education goals, as discussed above. The major in Materials Science and Engineering specifically requires that Economics 201 and one course from the Effective Communication Cluster be included as a part of this group.

Graduation in materials science and engineering requires a minimum grade point average of 2.00 for all departmental courses.

PROGRESSION TO UPPER-DIVISION PROGRAMS

Progression of students to departmental Upper-Division courses is competitive. Factors considered include overall grade point average, performance in selected lower-division courses and evidence of satisfactory and orderly progress through the prescribed curriculum.

Upper-Division Status

A Lower-Division student formally applies for Upper-Division Status after completing 50 semester hours of Lower-Division engineering curriculum course work with an overall GPA of at least 2.4. This must include Materials Science and Engineering 201.

Provisional Status

Students who have completed 50 semester hours of Lower-Division engineering curriculum course work with an overall GPA between 2.0 and 2.4 may apply for provisional status. The granting of Provisional Upper-Division Status is based on the availability of space in the departmental programs after Upper-Division Status students have been accommodated. Provisional students are required to demonstrate their ability to perform satisfactorily in upper-division courses by attaining a minimum GPA of 2.0 in at least 8 hours of 300-level required courses specified by the department. Further progression to upper-division courses is dependent upon this minimum level of performance.

Transfer Students

At the Upper-Division level students are admitted on a Provisional Status basis only. Any student presenting more than 28 hours of Lower-Division engineering curriculum course work by transfer credit is considered to be a transfer student.

MINOR IN MATERIALS SCIENCE AND ENGINEERING

A minor in Materials Science and Engineering (MSE) is offered through the College of Engineering to those undergraduate students who have met the prerequisites for the courses required by the minor. The minor requires completion of a minimum of 18 semester hours in course work which develops a foundation in MSE and allows concentration in MSE areas to be selected by the students (e.g., metallurgy, polymers, ceramics, composites, or electronic materials). Some of the courses used for the MSE minor may also satisfy requirements for the student’s major.

Students may enroll in the minor program by completing a form at the office of the Department of Materials Science and Engineering, 434 Dougherty Engineering Building. A copy of the completed enrollment form and information on the minor requirements will be forwarded to the student’s home department advisor. A copy of the form also will be filed with the Office of Records and Certification so that, upon completion, the minor will be shown on the student’s transcript.
GRADUATE STUDY PROGRAMS

Graduate programs leading to the degrees of Master of Science and Doctor of Philosophy with a major in Materials Science and Engineering or Polymer Engineering are offered. Detailed information about graduate programs in Materials Science and Engineering and the requirements for either M.S. or Ph.D. degrees are given in the Graduate Catalog.

MECHANICAL, AEROSPACE, AND BIOMEDICAL ENGINEERING

Professors:

Professors (Emeritus):

BACHELOR OF SCIENCE PROGRAMS

Mechanical Engineering involves the design, analysis, testing, and manufacture of mechanical and thermal systems. Mechanical engineers are employed in nearly every industry, from basic research through mass production of energy systems, computer software/hardware, robotics, and automobiles.

Mechanical Engineering is a versatile and broadly based engineering discipline that also provides pathways into many exciting fields of specialization. Its foundation is in the basic sciences, but mechanical engineers must further understand such subject areas as mechanical design, solid and fluid mechanics, thermodynamics, heat transfer, vibrations, manufacturing processes, instrumentation and automatic control. Design projects throughout the curriculum develop student skills in handling practical real-world problems. Because of the broad engineering foundation and design training in this program, graduates are found in nearly every industry and at different levels of research, design, and management.

The educational objectives of the Mechanical Engineering program are:
• To educate students thoroughly in methods of analysis, including mathematical and computational skills appropriate for application to engineering problems;
• To develop the skills pertinent to the design process, including skills needed for formulation of problems, analysis, synthesis, and skills pertinent to effective communication and collaborative work;
• To teach students to use modern experimental and data analysis techniques for engineering application; and
• To prepare students for lifelong learning, nourish creative talents, and provide understanding of professional and ethical responsibilities.

Aerospace Engineering uses the basic sciences and mathematics to develop the foundation for the design, development, production, testing, and applied research associated with aerospace vehicles. These vehicles include aircraft, spacecraft, and missiles. Auxiliary and propulsion systems are also an integral part of this education. These include guidance, control, environmental, ramjet, rocket, turbojet, and piston engine systems. Emphasis in the senior year is directed toward these topics, and the program culminates in a major aerospace design project.

An agreement among southern states for sharing academic programs allows legal residents of some states to enroll in certain programs at UT (Knoxville campus) on an in-state tuition basis. The undergraduate program in Aerospace Engineering is available on an in-state basis to students from Arkansas, Kentucky, Louisiana, and South Carolina.

A coursework program leading to a minor in Aerospace Engineering for students in other engineering degree programs is also offered.

The educational objectives of the Aerospace Engineering program are:
• To provide students with a comprehensive education that includes in-depth instruction in aerodynamics, structures, flight mechanics, orbital mechanics, flight propulsion, and the design of aerospace systems;
• To provide students for professional careers in Aerospace Engineering by developing the skills pertinent to problem solving, analysis, design, and those personal skills required for teamwork and effective communication;
• To provide adequate opportunities to develop and cultivate lifelong learning skills, individual professionalism and ethics, and to nourish creative talents.

The Biomedical Engineering degree curriculum integrates selected engineering sciences and design methods with life science course work. The program prepares students for careers in a variety of health care related professions including work for medical device manufacturers and regulatory governmental agencies. The educational objectives of the biomedical engineering curriculum complements the departmental strengths in mechanical engineering and includes a comprehensive coverage of engineering materials and biomechanics applications. Elective courses are available to allow students to specialize their curriculum to areas of particular interest. Biomedical engineering education is pertinent to the marketplace such as cellular and tissue engineering applications. The biomedical engineering program also allows students to meet medical school admission requirements with an appropriate selection of technical electives.

The educational objectives of the biomedical engineering program are:
• To provide students with a solid foundation in mathematics, the basic and engineering sciences and engineering design methods;
• To provide students with a comprehensive integration of engineering methods of problem-solving and design with the biological sciences;
• To develop the skills needed for work in the medical device industry including a thorough coverage of engineering materials, biomaterials, biomechanics, medical device design, and work in interdisciplinary teams;
• To provide essential laboratory experience with commonly used biomedical devices and systems and to provide coverage of methods for the design of experiments in medical and life science applications;
• To provide a biomedical technology-based engineering background for students desiring admission to medical school with admission requirements being met through the appropriate selection of elective course work.

ACADEMIC COMMON MARKET

An agreement among state for sharing academic programs allows legal residents of some states to enroll in certain programs at UT (Knoxville campus) on an in-state tuition basis. Aerospace Engineering is available on an in-state basis to students from Arkansas, Kentucky, Louisiana, and South Carolina. Bio-medical Engineering is available on an in-state basis to students from Alabama, Arkansas, Kentucky, Maryland, Mississippi, South Carolina, and West Virginia.

PROGRESSION TOWARD GRADUATION

The freshman year curriculum is common to all engineering majors. The sophomore curriculum is nearly identical for all students in the department. The first two years are considered to be lower division and the two remaining years upper division. Upon completion of the lower division courses the student must apply for progression to the upper division in order to continue in the department. Students allowed to progress may be awarded Full Status or Provisional Status. Factors considered include overall grade point average, performance in lower division engineering and math courses, and evidence of orderly progression through the lower division curriculum.

Full Status

A Lower Division student may apply for progression to Upper Division after completing 47 semester hours of Lower Division engineering curriculum course work with an overall GPA of at least 2.4.

Provisional Status

Students who have completed 47 semester hours of Lower Division engineering curriculum course work with an overall GPA between 2.0 and 2.4 may apply for Provisional Status. The granting of Provisional Status is based on the availability of space in departmental programs after Full Status students have been accommodated. Provisional Status students are required to demonstrate their ability to perform satisfactorily in Upper Division by attaining a minimum GPA of 2.0 in the first 12 semester hours of 300 level required engineering courses.

Award of Upper Division Full Status is dependent upon this performance.

Students with an overall GPA less than 2.0 in 47 hours of Lower Division engineering curriculum course work will not be admitted to Upper Division. Students who have not progressed to Upper Division will be dropped from departmental class rolls.

Transfer Students

Students transferring more than 26 hours from another institution are considered Transfer Students. Students transferring 47 hours or more will be admitted to Upper Division, if eligible, with Provisional Status.

Loss of Full Status

Full Status students are expected to maintain a overall GPA of 2.0 and a GPA of 2.0 in departmental courses taken at UT. Students transferring 47 hours or more will be admitted to Upper Division, if eligible, with Provisional Status.

Graduation Requirements

A minimum cumulative GPA of 2.0 in all departmental courses taken at UT is required for graduation. This is in addition to the University’s graduation requirements.

GRADUATE STUDY PROGRAMS

Graduate programs leading to the degrees of Master of Science and Doctor of Philosophy with a major in Mechanical Engineering or Aerospace Engineering are available to graduates of other curricula who satisfy the necessary prerequisite courses. The general requirements for advanced degrees are summarized in the Graduate Catalog.

Graduate programs leading to the degrees of Master of Science and Doctor of Philosophy with a major in Engineering Science are available to graduates of recognized curricula in engineering. Graduates of recognized curricula in mathematics, computer science or one of the physical or biological sciences may also qualify for admission depending upon their background. Each applicant is advised as to any prerequisite courses needed to enter a program. Program options include solid and fluid mechanics (with emphasis toward computational techniques), biomedical engineering, artificial intelligence applications, composite materials and fracture mechanics. Interdisciplinary programs are arranged to meet individual needs or interests. The student’s program of study must be approved by his or her advisory committee, and must comply with the requirements of the Graduate School.

NUCLEAR ENGINEERING

Professors:
H.L. Dodds (Head), Ph.D. Tennessee, P.E.; L.F. Miller, Ph.D. Texas A&M, P.E.; L.W. Townsend, Ph.D. Idaho; R.E. Uhrig (Distinguished Professor) Ph.D. Iowa State, P.E.; B.R. Upadhyaya, Ph.D. California, P.E.

Professors Emeritus:
T.W. Kerlin, Ph.D. Tennessee; R.B. Perez, Ph.D. Madrid; P.N. Stevens, Ph.D. Northwestern, P.E.

Research Professors:

Associate Professors:
P.G. Groer, Ph.D. Vienna (Austria); J.W. Hines, Ph.D. Ohio State; R.E. Pevey, Ph.D., Tennessee, P.E.; A.E. Ruggles, Ph.D. Rensselaer; T.H. Scott, Ph.D. Florida, P.E.

GENERAL

Nuclear engineering is the engineering discipline that focuses on the application of nuclear and atomic processes for the benefit of mankind and the environment. Radiological engineering is a specialty of nuclear engineering that addresses biological applications such as radiation safety (health physics). Some examples of nuclear and radiological engineering are production of electric power with essentially no air pollution, production of radioisopes for medical and industrial uses, and development of radiation based methods for the diagnosis and treatment of cancer.

The mission of the Nuclear Engineering Department is to:
1. Produce high quality nuclear and radiological engineering graduates from undergraduate through the doctoral level in order to help meet the manpower needs of our state, region, nation, and the international community.
2. Conduct nuclear and radiological engineering related research to help meet the needs of society.
3. Perform service for industry, government, professional organizations, and the public in areas related to nuclear and radiological engineering.

Additional information about the Department and its programs is available on the Department’s web site at www.engr.utk.edu/nuclear.

BACHELOR OF SCIENCE PROGRAM

The program for the B.S. degree in Nuclear Engineering is nationally accredited by the Accreditation Board for Engineering and Technology (ABET) which is described earlier in this catalog. The educational objectives of the B.S. program are to:
1. Provide students with fundamental knowledge in mathematics, computer science, the basic sciences, and the engineering sciences that is necessary to solve state-of-the-art problems in nuclear and radiological engineering.
2. Provide students with a real-world design and analysis experience in nuclear and radiological engineering that shall include environmental, societal, safety, and economic considerations.
3. Provide students with appropriate skills in oral and written communication, teamwork, laboratory work, problem solving and the use of modern engineering tools that will prepare them to work productively in a contemporary and global environment.
4. Provide students with a diverse general education in the humanities, ethics, and social sciences to complement their technological education in order to understand and appreciate the importance of each in society and in personal development.
5. Foster a genuine desire for life-long learning in students.
Students majoring in nuclear engineering take courses in the basic sciences, engineering fundamentals, mathematics, computer science, humanities, and special areas of nuclear engineering including nuclear system design and safety; radiation transport and shielding; heat transfer and fluid flow; instrumentation and controls; fuel cycle and waste management; and health physics. Nuclear engineering students may concentrate in radiological engineering by substitution of three courses. The radiological engineering concentration also satisfies most of the requirements of pre-med, pre-vet, and pre-dentistry programs.

MASTER OF SCIENCE PROGRAM

A graduate program leading to the Master of Science degree in nuclear engineering is available to graduates of recognized undergraduate programs in engineering, physics, chemistry, biology, or mathematics. Each applicant will be advised as to the necessary prerequisite courses before entering the program. The general requirements of the Master of Science degree are summarized in the Graduate Catalog.

DOCTORAL PROGRAM

A program leading to the Ph.D. degree is available in nuclear engineering. For details, see the Graduate Catalog.

ACADEMIC COMMON MARKET

An agreement among states for sharing academic programs allows legal residents of some states to enroll in certain programs at UT Knoxville campus on an in-state fee basis. The undergraduate program in Nuclear Engineering is available on an in-state basis to students from Alabama, Arkansas, Delaware, Kentucky, Louisiana, Mississippi, South Carolina, Virginia and West Virginia.

CURRICULA

Course requirements for the various engineering curricula are listed on the following pages. The numbers in the columns indicate the number of semester hours of credit for each course. Individual course prerequisites should be strictly adhered to, even if courses are not taken in the semester indicated. Although the requirements for each degree can be completed in four academic years (five for the cooperative program), the quality of the learning experience is much more important than the speed with which the curricula are completed.

Questions about individual courses should be directed to the department responsible for the course; questions about a particular curriculum should be directed to the major department.

Prerequisites

Before registering for any engineering course, a student should make certain that any necessary background work has been completed. In addition to specific prerequisites listed, it is assumed that a student taking sophmore engineering courses has completed all freshman courses, whether specifically listed as a prerequisite or not. When this is not the case, a student should seek advice from the advisor or department responsible for the course in question before registration so as to minimize the chances of academic difficulty. Students who do not have prescribed prerequisites may be dropped from a course at any time during a semester when the lack of prerequisites is discovered.

FRESHMAN YEAR

The following freshman year curriculum is common to all engineering programs except Engineering Physics. (Engineering Physics students should see the curriculum that follows.)

AtLeast 1 Course from the Professional and Ethical Responsibility Cluster, and at least 1 course from the Effective Communications Cluster.

At least two of the CPE Senior Electives must be ECE courses. At most, one CPE Senior Elective can be from any 300-level ECE courses. Approved CPE Senior Electives are: ECE 325, 336, 341, 411, 412, 421, 422, 423, 431, 432, 441, 443, 446, 471, 472, 481, 482, 494, ECE 453; CS 370, 420, 430, 460, 470, 494; IE 405; ENGL 360.

1See College list of approved courses. All electives must be pre-approved by the advisor and department head.
